Vaux. 1632.

*A Prognostication for the
yeare of our Lord God 1632.
being the Bissextile or Leap yeare.*

*Wherein is declared the state of the
four Quarters of the yeare, the E-
clipses, and other things of good
consequence.*

*With divers pretty notes and
pleasant observations fit for
all sorts of people.*

*By IOHN VAUX of St.
Hellen Awckland.*

*The soule that turneth after such as
have familiar spirits, and after wi-
zards, to goe a whoring after them,
I will even set my face against that
soule, and will cut him off from a-
mong his people. *Levit. 20. 6.**

To the friendlie Reader.

Christian and friendly Reader; Our first Parent and great Grand-father Adam, by his transgression and disobedience, brought unto us our Autumne, or Fall, our Winter and buriall. And afterward, by the mercifull promise of Almighty God our heavenly Father, was sent downe from him our second Adam, (by his obedience fulfilling the Law) to redeeme us from that fall, and to signifie unto us, our Spring or resurrection, our Summer, and full perfection. For as Adams creation and fall was in September in the beginning of Harvest: so Christs incarnation, death and resurrection was in March in the beginning of the Spring-time. And therefore the foure seasons of the yeare may fitly be thus compared: Vix: Harvest, to our last end, Mat. 13. 39. Winter, to our rest in the grave untill the resurrection: Iohn 12. 24. 1 Cor. 15. 36. Because then, the sappe which is the life, is then

B 2

descended

A Prognostication.

descended unto our mother Earth, and by her reserved untill the Spring: The Spring time resembleth unto us our resurrection and restoration. And Summer noteth unto us, our full growth, perfection and Eternity in Christ. Thus in verse.

By Harvest, when the leaves doe fall,
Is shew'd the last end of us all:
And aged Winter, livelesse, cold,
Incloeth us in earthy mould:
The Spring revives us after death,
And gives unto us a new breath:
And Summer doth foreshew that state,
Which shall remaine withouten date.

*Now, if we duly consider, and well observe the yeares of late, with divers historicall relations thereof, we may easily remember, that most of the signes of the worlds period are already past, and some few only remaine. Wherefore, Howle ye; for the day of the Lord is at hand; it shall come as a destruction from the Almighty. For the starres of heaven, and the constellations thereof shall not give their light: the Sunne shall be darkned in his going forth, and the Moone shall not cause her light to shine; *Isaiah 13. 6, 10.**

WIN-

Vaux. 1632.

Winter.

WInter (according to Astronomi-
call computation) began the 12
day of December last 1631, at
what time the Sunne entred into the first
minute of the Southerne and tropicall signe
Capricornus, making the dayes shortest,
& the nights longest, at which time he be-
gan his Northerne progresse towards the
Equator. This Quarter is of its owne na-
ture cold and dry, at which time the earth
is at rest, and ceaseth to bring forth, that it
may gather together againe, and recover
the lost strength against Summer: from
Winter most commonly bindeth the earth,
which it warmeth & covereth with snow
as with a garmēt, & refresheth it with store
raine: For snow and Ice are comfortable
to corne, and bringeth plenty of all things.
And after the Sunne hath accomplished his
last degrees under Aquarius and Pisces, he
openeth the earth with new and pleasant
gales of winde, and prepareth the Spring
time: and this is the generall and proper
temperament of every Quarter of the yeare
which is alwayes to be considered in Me-
teorologie, lest that we speake of flowers
in winter, and of ice in Summer.

A Prognostication.

Of the Spring.

THe Spring beginneth at the Suns entrance into the first minute of Aries, making then the dayes and nights of an equall length throughout the world, which shall be this yeare the 11 of March. This Quarter is by nature hot and moyst: For then the Sunne is both come nearer unto his verticall point, and also to starres of a hotter nature, causing thereby the drier windes to blow; of which is Subsolanus, and Favonius, called the west windes, wherewith superfluous humours are wasted and consumed, the seede conveniently sowne, and the ground stirred and made fit to bring forth; which setteth forward trees vines, flowers, and leaves, and bedecketh the earth with grasse and hearbs. But because the new and tender corne lately sprung up, requireth moystning shewers, there ariseth in the morning Pleiades, Hyades, and Orion, and in the evening Arcturus, tempestuous and moyst starres, which stirreth up raine and moyst windes. At the length the Sunne (comming to Gemini) moveth a convenient and temperate heate to the former seed-time.

The

Vaux. 1632.

*The Spring and Summer both waxe old,
And are become like Winter, cold:
Thus times and seasons doe decay,
As we our selves doe every day:
For heaven and earth must have an end,
When we shall from our graves ascend:
And be renew'd from earth againe,
With Christ for ever to remaine.*

Of Summer.

Summer beginneth at the Suns ingresse into the first minute of the Northerne and Tropicall signe Cancer, which will be the 12 of Iune. This Quarter is by nature hot and dry, at whose beginning there ariseth Presepe, Aselli, and other fixed starres of a moylstning vertue, from whence by the Sunnes accessse is stirred up raine to bring forward corne and other fruite. But after that the things growing from the earth have attained a just increase, and by heate, waxeth toward maturation and ripenesse, the Sunne approaching the hot signe Leo, there ariseth Syrius and Procion, which are starres of a hot constellation: therefore great heate is stirred up, to the tempering whereof the Ethesian windes blow in the day-time; afterward the Sunne comming to

A Prognostication.

Virgo, the said heate is mitigated by little and little, and at the rising of Arcturus it bringeth raine.

Autumn, or Harvest.

A Vtunne beginneth the 14 of September, when the Sunne entreth into the first minute of the Equinoctiall signe Libra, making then the nights equall with the dayes. This Quarter is by nature cold and dry: For the heate ceaseth with the Summer passed. And although plentifull shewers doe then fall, so that the vintage is then abundant, and the winter seed-time is made more commodious: yet notwithstanding the remaining heate of the ayre which by the Sunnes access to hot starres in Sagittarius, is somewhat increased, and the moisture of the earth drawne up, and the ground cherished and prepared for the winter following, lest cold comming on a sodaine, might hurt the seed and winter corne.

*The Basis of the foure Quarter Sessions,
according the Provision of the Statute
2 Hen: 5. cap: 4.*

Over

Vaux. 1632.

O Ver all the Realme the Sessions shall
be

In the first week after { *the Epiphany.*
the clause of Easter.
the translation of St. Thomas
the Martyr.
St. Michael the Archangel.

In prima Septimana post Ergo, non in ipsa eademq; Septimana. Nam septimus dies inclusive a die festo claudit festum: Octavusque dies Vras dicitur. For the word *Septimana* signifieth seven mornings. And therefore, when the Sessions are kept within the selfe-same weeke wherein the feast falleth, (which is the Basis of the same Sessions) the direction of the Statute is thereby frustrate and made void. Thus much under favour. The word [after] expounding it selfe.

Starre-chamber dayes.

VV Ednesday and friday throughout every Term-time are Starre-chamber dayes. Note also, that if any Term end not upon a wednesday or friday, then, the next wednesday or friday after the ending of the Terme is a Starre-chamber day. But if a holy day fall upon a wednesday or friday in the Terme-time, then the Starre-chamber day is kept upon the holy Eve.

of

A Prognostication.

Of the County or Moneth Court.

NO County from henceforth shall be holden, but from moneth to moneth; and where greater time hath beene used, it shall be kept so still; *Magna Charta, cap: 35.* And afterward in the time of King Edward the sixth, this *Major terminus* was restrained to a moneth onely as followeth.

No County Court or Courts hereafter to be kept within this Realme, shall be longer deferred, but one moneth from Court to Court, & so the said Courts from henceforth shall be kept every moneth, and none otherwise; any usage, custome, statute, or law heretofore had or made to the contrary in any wise notwithstanding: 2 *Edw: 6. cap: 25.* The necessity of keeping this Court every moneth, and upon a day certaine, is by reason of the Kings writs of Exigents, which must be read there. But when the lawes are observed according to the true intent thereof, it will be a golden world.

Of the Eclipses of this yeare 1632.

THere will be foure Eclipses of the two lights this yeare: two of the Sunne, and two of the Moone.

The first Eclipse of the Sunne according
to

to the forraigne computation, will be the 19 day of Aprill, but with us in England the 9 day of the same moneth 40 minutes after 10 of the clocke in the forenoone.

The second Eclipse will be of the Moon the fourth day of May according to the forraigne computation, but the 24 of Aprill according to our English account.

The third Eclipse will be of the Sunne, the 13 day of October, according to the Lilian computation in the North part of America, which is called Mexicana, but the 3 day of the same moneth according to the Iulian account.

The fourth Eclipse will be of the Moone the 27 day of October according to the Gregorian account, but the 17 day of the same moneth according to the Iulian account:

Of the moving of the Planets.

S *Atterne* abideth in every signe 30 moneths.

Jupiter abideth in every signe one yeare.

Mars abideth in every signe 60 dayes, and 16 houres.

The Sunne abideth in every signe 30 dayes, 10 houres and a halfe.

Venus

A Prognostication.

Venus abideth in every signe 29 dayes ; and endeth his course in 348 dayes.

Mercury abideth in every signe 28 dayes and 6 houres, and endeth his course in 338 dayes.

The Moone abideth in every signe two dayes and a halfe, and almost 6 houres, and endeth her course from point to point in 27 dayes and 8 houres.

To each of the five Planets is assigned 3 circles; that is to say, *Equans*, *differens*, and *Epicyclus*. There is also in these circles three manner of motions, viz: *Motus directus*, *Stationarius*, and *Retrogradus*. *Motus directus* is even forward according to the succession of the signes, and in the over part of the circle *Epicyclus*. *Motus Stationarius* is in the middle of the circle *Epicyclus*, when a Planet seemeth to move neither upward nor downeward, backward nor forward. *Motus retrogradus* is backward, when a Planet moveth contrary to the succession of the signes, and in the nether part of the circle called *Epicyclus*.

Saturnus hath that name of *saturando*, making fulnesse and plenty. *Saturne* grieveth more, and doth more hurt when he is retrograde, than when he is direct.

Jupiter is the Lord and giver of substance,

stance, and he is called father of the Gods or Planets.

Mercurius, quasi medius currens, as running in the middle betweene *Venus* and the Moone : *Mercury* is alwayes either one signe before the Sunne, or one signe behind

Sol, quasi solus lucens, alone shining, the well of light ; all the rest of the Planets receive light of the Sunne, as a glasse set before a candle receiveth light of the candle,

The Moone is called the fairenesse of the night, mother of all humours, Lady of the sea, measure of times, follower of the Sun, and changer of times.

Of Houres.

AN houre is no other thing than the 24 part of a day. And it is so called of the Greeke word *oura*, which in Latine is *tempus*. The planetary and temporall unequall houres, or comprehended by an unequall number, are called masculine : even or equall houres are called feminine.

The Astrologians call those houres combust, which are taken after the conjunction of the two lights ; and in these houres an Astrologian doth not expedite or take in hand any businesse.

A Prognostication.

Canonically houres are those which are addicted to divine prayers, also they suffer by themselves some partition of the time and day.

And of those divisions there are seven: *Viz. Matutina, Prima, Tertia, Sexta, Nona, Vespertina, et Completoria.*

Matutina is the dawning of the day, *Mat: 20. 1. & 28. 1.*

Prima, is the houre of Sunne-rising.

Tertia, is nine of the clocke in the fore-noone, *Mat: 20. 9.*

Sexta, is twelve of the clock, called high noone, *Luke 23. 44.*

Nona, is three of the clocke in the afternoone, *Acts 3. 1.*

Vespertina, is the houre of Sun-set.

Completoria is the houre of Twilight. At which time in some places, they use to ring a bell for the space of an houre, by the sound whereof all travellers and strangers may draw to the towne, and not wander out of their way.

The Quadrants of an houre.

AN houre is divided into foure Quadrants or quarters, and every quarter containeth 15 minutes: so that the whole houre

Vaux. 1632.

houre is divided into 60 minutes.

A minute is the fixty part of an houre,
and it is so called of the verbe *minuo*, be-
cause by little and little it diminisheth the
houre.

A minute is divided into 60 seconds,
and every second into 60 thirds, and so into
an infinite number by a Sexagenary divi-
sion.

Descripti hic breviter cunctis cum partibus annum,
Vnde pater, celeri quod cursu labitur ævum,
Et veluti rapido semper pede transvolat ætas:
Sic hominum quoque vita fugit, nec fixa manebit:
Ergo summe Pater me æterna ad sæcula serva,
Nam nihil hæc vita est, nisi cura laborque perennis.

 Here followeth a Ta-
ble, plainlie explaining the Act
against Usurie, 21 Iacobi. cap. 17.
Anno Dom. 1624. *It was enacted*
that no man should take for his money
above eight pounds in the hundreth
for a whole yeare: That is to say, for
every five Crownes two shillings,
&c. As in the table following.

The

	96	5		7	14	
	97	10		7	16	
	98	15		7	18	
	100	0		8	0	

This Table is to be read thus :

THe Principall being 1 £ 5 ̄, will yeeld according to 8 in the hundreth of 2 ̄ Interest, & so of all the other Summes following.

This Act being made to continue seven yeares from the Feast of *St. Iohn Baptist*, *Anno Dom: 1625*, and so to the end of the first Session of Parliament then next following, was *Anno 3. Car. Cap. 4.* made perpetual.

This last Table increasing from 5 crowns to 400, which makes 100 pound, is easie enough without any familiar example. Because at the end of any broken or whole Summe

Vaux. 1632.

Summe under 100 pound, the just Interest placed directly against it.

And there is no man that can rightly compute it otherwise. For you cannot reckon it justly by the rate of even pounds, but either your account will exceede or come short. For if you shall take 19 \bar{s} the pound, it will come five groats short of 8 in the 100. And if you take 19 \bar{s} farthing for the pound, it will come to eight pound 5 \bar{s} for 100 pound, and so exceede. But to finde out the truth, doe thus : Divide your 100 pound into 8 equall parts, (because it is rated at 8 in the 100) and it will bee 8 times 12 \bar{l} 10 \bar{s} . For which (according to the Statute) you give or take 8 times. 20 \bar{s} , which is 8 \bar{l} . And for all lesser Summes, I referre you to the Table. When money was lent for 10 in the 100, the borrower paid for foure crownes two shillings, but now being rated at 8 in the 100, it is five crownes for 2 \bar{s} for a whole yeare.

A perfect rule whereby to finde the Golden number for ever without any addition.

FROM the yeare of our Lord propounded deduct 1500, and divide the rest by 19, and that which remaineth is your desire. But if nothing remaine, so that the division

A Prognostication.

be equall, 19 shall be the Golden number of the yeare proposed.

Example.

In this yeare of our Lord 1632, I desire to know the golden number: wherefore I subtract 1500, and I divide 132 which remaineth by 19, and there remaineth 18 for the Golden number of this yeare. And this is the readiest way to worke by.

Here followeth a new devised Table, whereby to know the Epact for the English or forraigne computation for ever; by two Article numbers framed for that purpose, and placed directly over the golden numbers; serving for any yeare past, present, or to come.

Article numbers for the English account.	10	20	0
Article numbers for the forraigne account	0	10	20

The use of this Table is thus.

First finde in the Table, the Golden number for the yeare proposed, and adde unto it the Article number, which is placed directly over it, and those two numbers so added together (if they doe not exceed thirty) is the Epact of the year desired But if they do exceed 30, the overplus is the Epact of the yeare which you seek for.

The Golden numbers	1	2	3
	4	5	6
	7	8	9
	10	11	12
	13	14	15
	16	17	18
	19	0	0

Exam-

Vaux. 1632.

Example.

I would know the Epact for this yeare of our Lord 1632, the first of March: wherefore by the rule before taught, I made the Golden number to be 18. wherewith I enter this Table, and finding no Article number placed over the head thereof to be added thereunto, it signifieth that the Golden number and Epact are both alike. And so of all the rest of the Golden numbers placed in that Columnne. The same order must be observed for the forraigne computation.

*How to find the change of the Moone
by the Epact.*

ADde to the Epact the number of moneths from March, including the said moneth of March: then take that number from 30, if the moneth wherein you desire to know the change have 31 dayes in it; or if the moneth have but 30 dayes, then take it out of 29, and you shall have the day of the change remaining. But if in case the Epact, and the number of moneths so added exceed 30, take away 30 as oft as you can, and that which remaineth deduct out of 30, then looke what number remaineth of 30, and that sheweth the day of the moneth when the Moone changeth.

C 3

Example.

A Prognostication.

Example.

I would know when the Moone changeth in Aprill 1632. The Epact is 18, and Aprill is the second moneth from March, which being added unto the Epact, makes 26, which being taken out of 29 (because April hath 30 dayes) there remaineth 9, which is the day whereon the Moon changeth. And thus may you doe for all the rest of the moneths throughout the yeare.

To prevent contentions and wrangling suites in law.

IT was enacted *Anno 21 Jacobi, cap: 16.* That all action upon the case (other then for slander) Actions for Account, Actions for Trespasse, Actions for Debt, without specialty, detinue and Repleum for goods or cattell, Actions of Trespasse, *Quare clausum fregit*, shall be commenced and sued within sixe yeares next after the cause of such Actions of suit, and not after.

Actions of Trespasse, of Assault, Battery, wounding, imprisonment, shall be commenced and sued within foure yeares next after the cause of such Actions of suit, and not after

But all the Actions of Account concerning the trade of Merchandize betweene Merchant and Merchant, their Factours or
Servants,

Vaux. 1632.

Servants are excepted out of this Statute.
And this law is warrauted by the law of
God.

*At the end of every seven yeares thou shalt
make a release. And this is the manner of the
release : Every creditour that lendeth
ought unto his neighbour shall release it : he
shall not exact it of his neighbour , or of his
brother, because it is called the Lords release.
Of a forreigner thou maist exact it againe :
but that which is thine with thy brother ,
thine hand shall release : Save when there
shalbe no poore among you: Deut: 15. 1, 2, 3, 4.*

The third yeare ensuing which endeth in sixe,
Is much to be doubted of every sexe.

Libera nos Domine.

FINIS.
